	<p>My governing principle in terms of this operation is that the preservation of life and the protection of the public, police and subjects known and unknown is paramount at all times.</p>		
	<p>I recognise my obligation under Article 2 Human Rights Act to take preventative operational measures to minimise to the greatest degree possible, recourse to lethal operational force.</p>		
	<p>This operation is being conducted by two SFO teams including CT SFO's, who are highly skilled and highly trained. I have ready access to tactical advice and written tactical advice has provided me with a range of options to ensure this operation is conducted with minimal risk and maximised safety. Whilst this operation is covert I have the option of switching to overt and one of pure protection.</p>		
	<p>This will maximise the safety of all parties whilst balancing the evidential requirements to reduce the threat posed by the crew family and their criminal associates. <u>N.B THE NEED TO MAXIMISE EVIDENTIAL OPPORTUNITIES IS NOT A DETERMINING CONSIDERATION</u></p>		
	<p>I am satisfied, having applied the NDM that the rationale for the deployment of firearms remains valid. I have reviewed whether there is sufficient intelligence or evidence to allow any effective and sustainable action to remove or permanently disrupt this conspiracy.</p>

	There are none. This remained under review.		
	Ultimately my tactics will be dependent upon events that unfold and intelligence updates that I receive. I am satisfied that all tactical options available are covered in the SC019 generic tool boxes.		
	Anything further will be dynamically assessed in conjunction with my Tactical Aduser.		
	I am situated in C3000 Control Room, where I will have overview of three surveillance radio channels and all intelligence updates.		
	I will have direct lines of communication with my two TFC's on the ground, they will have authority to spontaneously respond to any spontaneous events which may occur. They are supported by two OFC's, will also direct links to the Tactical Aduser. They will have responsibility of executing my tactical decisions through their respective STO teams.		
	I have considered Tipping Points, and it is difficult to be precise prior to the operation with three different surveillance deployments. Ultimately for me it is all about <u>CONTROL</u> . If at any stage I take the view that I have insufficient control to maximise the safety of all parties I will revert to overt protection.

	even if this to the detriment of evidential opportunities.		
	At present the threat to all parties is low - this will remain subject of continuous review.		
	An overall briefing was conducted at 1pm 10-12-15, with individual team briefings this morning at Alpeton, Lincoln Road and Holborn and within C3000. The first two have been tape recorded.		
	The Armed Operation is 654/15. CAD 1252 I attach a grid which I will use to record my decision making process throughout the operation.
